

NIVAAS RAVINDRAN

SENIOR ASSOCIATE

Chennai, India | +91-9597072813 | iamnivaasr@gmail.com

PROFILE SUMMARY

Senior Associate with 4+ years of experience designing and building scalable Java Spring Boot microservices and REST APIs for financial and enterprise platforms — including loan origination, credit decisioning, and account servicing workflows. Skilled in API-first microservices architecture, object-oriented design and standard design patterns, and event-driven integration with Kafka. Proficient with modern engineering tools (Git, Maven, JUnit, Mockito) and actively leverages AI-assisted development (GitHub Copilot, Codex, Claude Opus, Augment) to accelerate delivery and improve code quality. Experience with React.js and modern JavaScript, with a strong track record of collaborating across engineering and business teams to deliver reliable, production-grade financial software.

KEY SKILLS

Backend & API Design: Java, Spring Boot, J2EE, REST APIs (API-First Design), Hibernate/JPA, Microservices Architecture

Software Design: Object-Oriented Programming (OOP), Standard Design Patterns, MVC, Domain-Driven Design (DDD), API Versioning, ORM

Messaging & Event-Driven: Kafka, Event-Driven Integration, Asynchronous Workflows

Engineering Tools & Testing: Git, Maven, Gradle, JUnit, Mockito, JaCoCo, Postman, Unit & Integration Testing

AI-Assisted Development: GitHub Copilot, Codex, Claude Opus, Augment — applied daily to accelerate development, debugging, and code review

Databases: PostgreSQL, MongoDB, MySQL, IBM DB2, Query Optimization, Schema Versioning (Liquibase)

Frontend: React.js, Redux, JavaScript, HTML5, CSS3

DevOps & CI/CD: Docker, Kubernetes, Jenkins, GitLab CI/CD, GitHub CI/CD, SonarQube

Security & Data: RBAC, Secure Authentication & Authorization, PGP Encryption/Decryption, Secure File Transfer (SFTP), Data Encryption

Methodology: Agile (Scrum), Software Development Life Cycle (SDLC), Cross-Functional Collaboration

Search & Observability: Elasticsearch, Kibana

Caching: Redis

Tools: Jira, Confluence, Eclipse, IntelliJ IDEA, VS Code, Figma

PROFESSIONAL EXPERIENCE

Senior Associate – Technology

Mar 2026 – Jul 2026

NorthernArc Capital Limited

- Developed and maintained Java Spring Boot microservices for NPOS, supporting loan booking, sanction, disbursement, enquiry, document, and validation workflows for a financial services platform.
- Engineered REST-based orchestration APIs integrating external schedulers with Airflow workflows, using dynamic run configuration, retry context, centralized logging, and error handling.
- Built scheduler-driven batch processing for sanction, disbursement, update, dedupe, and retagging flows with asynchronous file parsing, payload generation, and stateful request execution.
- Developed workflow progress and status APIs for monitoring stage transitions and payload outcomes across distributed orchestration flows.
- Authored and optimized Drools DRL rules for credit policy and risk decisioning, covering CIBIL/NTC, FOIR, DPD, income, APR, processing fee, and parent-loan performance checks.
- Maintained PostgreSQL rule deployment workflows through Liquibase migrations, supporting version-controlled rule templates and controlled credit-policy rollouts.
- Contributed to secure financial data processing using PGP encryption/decryption and SFTP integrations, and supported production troubleshooting across partner-specific loan workflows.

- Used GitHub Copilot, Codex, and Claude Opus to analyze existing code, troubleshoot issues, and improve development productivity across microservices.

Java Backend Developer

Mar 2025 – Dec 2025

Xpheno Pvt Ltd – Tekion Client (GM Brands: Buick, Chevrolet, GMC, Cadillac, CarBravo)

- Designed and developed Java Spring Boot microservices supporting Vehicle Search Results, Vehicle Details, and Configurator modules across all GM brands.
- Built secure, versioned REST APIs for search, filtering, incentives, and vehicle build workflows, optimized for high-concurrency and high-traffic usage.
- Implemented data ingestion and synchronization pipelines for inventory and incentive data from GM and third-party systems, focusing on consistency and fault tolerance.
- Developed backend services for Pricing and Finance portals with RBAC, audit logging, secure file exchange, and compliance-driven workflows.
- Owned backend delivery across design, development, unit testing, CI/CD deployment, monitoring, and production support.
- Used Augment AI for codebase analysis and refactoring; supported pull request reviews via Persona in GitLab.

Software Engineer

May 2023 – Mar 2025

OSS Technologies Pvt Ltd – Catalina Resources Client

- Developed enterprise MVC applications using Java and Spring Boot for User Management and Resource Planning modules.
- Implemented RBAC, secure authentication, scalable backend features, and REST APIs using Spring Boot, MySQL, and MVC practices.
- Applied object-oriented and domain-driven design principles to structure application components and business workflows.
- Improved resource management efficiency by 20% through enhancements to the Resource Planning module.
- Participated in Agile sprints, code reviews, defect resolution, testing, and production-ready delivery.

Trainee Programmer

Apr 2022 – Apr 2023

SolverMinds Solutions & Technologies – Hapag-Lloyd Client

- Developed and maintained Spring Boot features for Schedule Management, including ship schedules, ETA/ETD handling, and port operations monitoring.
- Integrated backend APIs with real-time maritime data and implemented secure access controls and data validation workflows.
- Worked with React.js, Redux, JavaScript, HTML5, and CSS3 for enterprise web application features.

CERTIFICATION

Java Full-Stack Web Development — Qspiders, Chennai | Sep 2021 – Apr 2022

EDUCATION

B.E. Mechanical Engineering, Anna University | 2014 – 2018
